

Business Question and Visualization Report

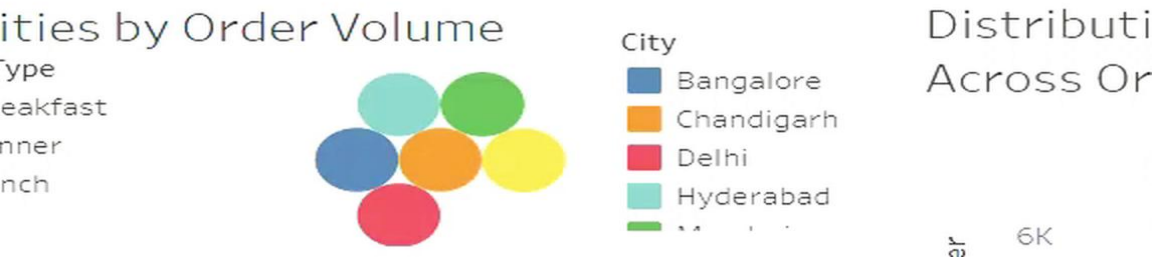

Date	20 th July 2026
Team ID	Akshat obero
Project Name	Food Ordering Behaviour Analysis
Maximum Marks	5 Marks

Business Questions and Visualizations

Q1: Which cities generate the highest order volume for the food ordering platform?

- **Visualization:** A packed bubble chart, with each bubble sized and colored by city, showing total order counts across Bangalore, Chandigarh, Delhi, Hyderabad, Mumbai, and Pune.
- **Insight Provided:** Identifies which cities drive the most order volume, allowing operations teams to prioritize city-level resourcing and marketing spend.

Q3: What does the distribution of delivery time look like across all orders?

- **Visualization:** A histogram (Count of Time Taken to Order) binned across delivery time ranges.
- **Insight Provided:** Reveals how consistent delivery performance is and flags the share of orders falling into slower delivery bins that may need dispatch attention.

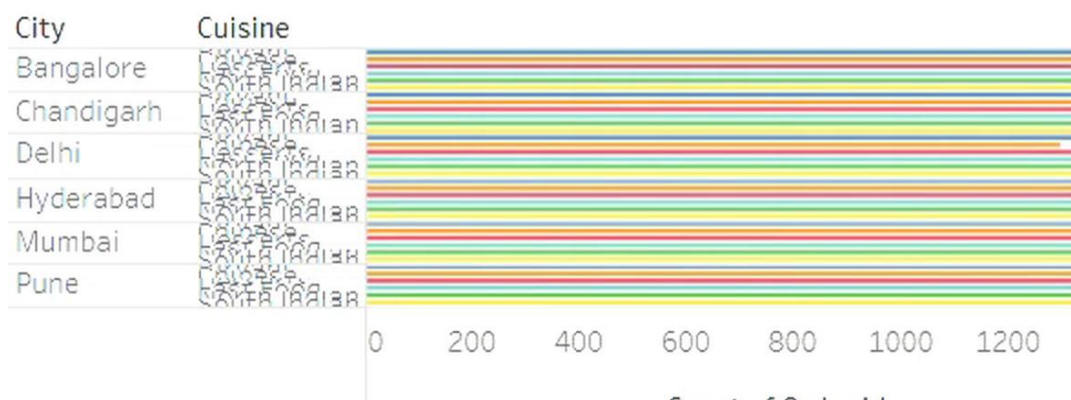

Q4: How does cuisine preference (Flavors Across Cities) differ from one city to another?

- **Visualization:** A stacked horizontal bar chart per city, with each bar segmented by cuisine type (Biryani, Chinese, Desserts, Fast Food, North Indian, South Indian).
- **Insight Provided:** Shows which cuisines dominate demand in each city, supporting city-specific menu and restaurant-partnership decisions.

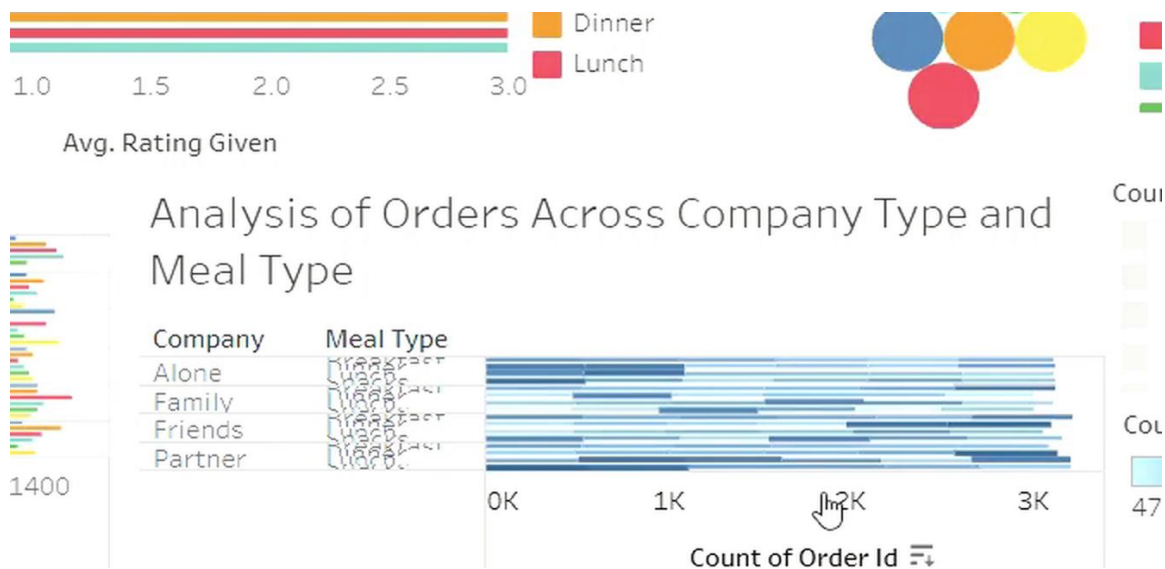

Flavors Across Cities

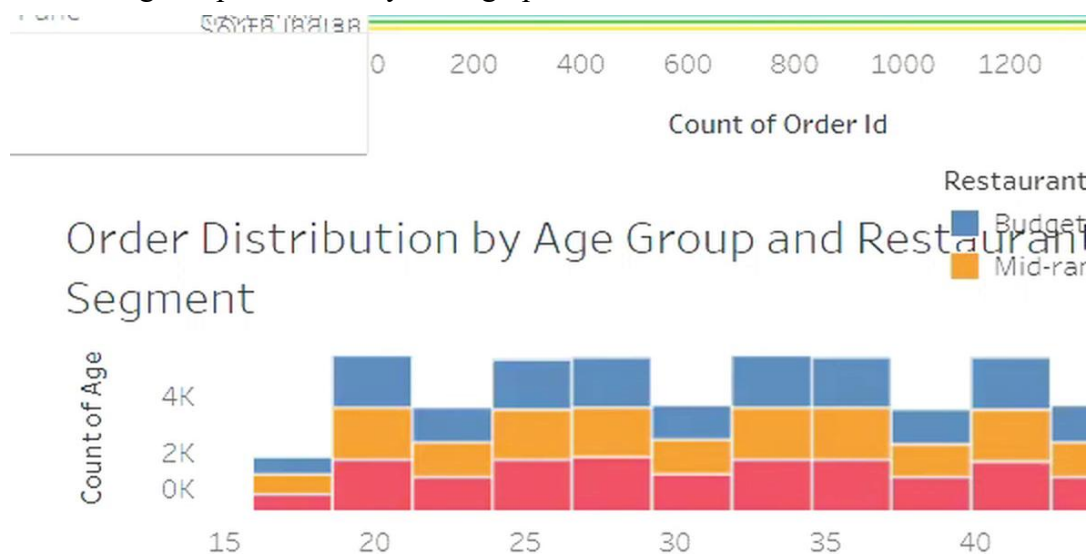

Q5: How are orders distributed across company/dining type and meal type?

- **Visualization:** A grouped bar chart comparing order counts across company type (Alone, Family, Friends, Partner) split further by meal type.
- **Insight Provided:** Shows that group dining (Family & Friends) drives a large share of orders at specific meal times, informing bundle offers and portion-sized promotions.

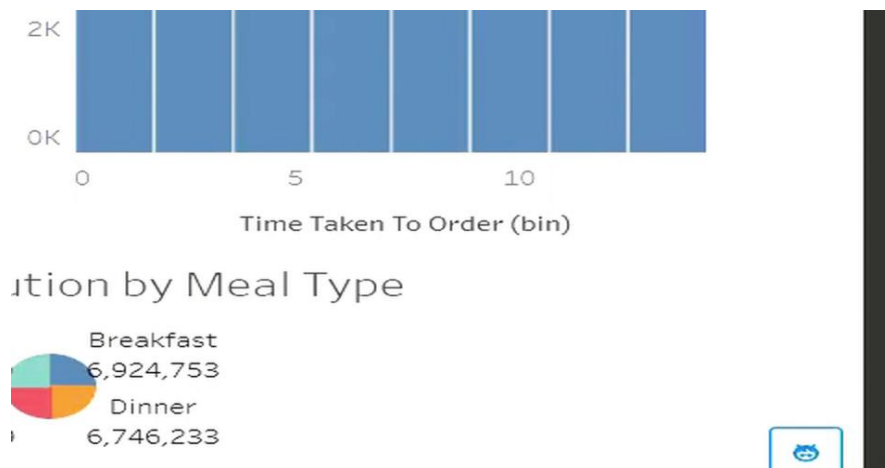

Q6: How is order volume distributed by customer age group and restaurant segment?

- **Visualization:** A grouped column chart showing count of age, segmented by age brackets (15–45) and cross-referenced with restaurant type/segment.
- **Insight Provided:** Identifies which age groups favor which restaurant segments, useful for targeted promotions by demographic.

Q7: How is total revenue contributed across the four meal types?

- **Visualization:** A donut-style breakdown showing revenue contribution split across Breakfast, Lunch, Dinner, and Snacks.
- **Insight Provided:** Shows that Lunch and Snacks contribute the largest revenue shares, guiding where menu investment and promotional focus should go.

Q8: What is the distribution of customer preferences across cuisines overall?

- **Visualization:** A bar chart ranking cuisines (Biryani, Chinese, Desserts, Fast Food, North Indian, South Indian) by total order count.
- **Insight Provided:** Surfaces the most and least popular cuisines platform-wide, supporting restaurant onboarding and cuisine-category marketing priorities.
